

Sara Gabrielly do Nascimento Silva

Natal, RN, Brazil • sara.silva.114@ufrn.edu.br • linkedin.com/in/saransilv
github.com/Sgnsilv • sgnsilv.github.io

Education

Federal University of Rio Grande do Norte (UFRN)

B.Sc. in Computer Engineering

Natal, RN, Brazil
2023 – Expected Dec 2027

Federal Institute of Rio Grande do Norte (IFRN)

Technical Degree in Mechatronics

Natal, RN, Brazil
Completed in 2022

Experience

Federal Justice of Rio Grande do Norte (JFRN)

Software Development Intern

Natal, RN, Brazil
Mar 2026 – Present

- Develop and maintain institutional applications in an Agile/Scrum team, working across the stack with Angular, TypeScript, Java, and Spring Boot.
- Implement features and address technical debt involving business rules, REST APIs, security, data persistence, and service integrations.
- Contribute to AI solutions for the legal domain involving RAG, hybrid retrieval, vector search, LLMs, audio transcription, and automated document analysis.
- Use AI-assisted development tools, including Codex, to support debugging, implementation, and code review while maintaining technical validation of generated solutions.
- Collaborate on merge request reviews, automated testing, API documentation, and end-to-end feature validation.

Retail

Cashier

Natal, RN, Brazil
Aug 2024 – Mar 2026

- Worked in a high-volume customer-facing environment, developing communication, accountability, and problem-solving skills.

Federal University of Rio Grande do Norte (UFRN)

Reading and Writing Teaching Assistant

Natal, RN, Brazil
Apr 2025 – Dec 2025

- Supported undergraduate students in developing academic reading, writing, and communication skills.
- Organized and facilitated classroom discussions, encouraging argumentation, participation, and the exchange of different perspectives.

Research & Activities

Undergraduate Research in Bioinformatics

Undergraduate Researcher

UFRN
Aug 2023 – Sep 2024

- Conducted research on applying Deep Learning to genomic classification of SARS-CoV-2 variants, developing foundations in Python, data processing, and Machine Learning.

Research Project – EMG Signals and Robotics

Research Participant

UFRN
Sep 2024 – Dec 2024

- Participated in exploratory research on robotic arm control using electromyographic (EMG) signals, including signal acquisition, initial analysis, and frequency-domain processing techniques.

IEEE Robotics and Automation Society (RAS)

Extension Project Member

UFRN
2024 – 2025

- Participated in hands-on robotics and prototyping activities involving Arduino, 3D printing, electronics, and soldering.
- Led an introductory Arduino workshop, guiding participants through assembling and programming an LED control circuit.

Projects

Morada Digital – Condominium Management Platform

GitHub | React, Firebase, Firestore

- Developed a web platform for condominium management featuring authentication, role-based access, shared-area reservations, announcements, and document management.

- Built usability-focused interfaces and integrated Firebase Authentication and Firestore, delivering a functional deployed version.

Mandaladaka – Restaurant Management System

GitHub | Next.js, Flask, MariaDB

- Collaboratively developed a full-stack application for managing restaurant orders and tables, integrating a web interface, REST API, and relational database.

Applied Algorithms and Data Structures Projects

UFRN

Python, Graphs, OSMnx, NetworkX, NLP

- Developed applied graph theory and data analysis projects, including urban route optimization with Dijkstra and A*, structural analysis of Natal's road network, and academic text mining using TF-IDF and NMF.
- Worked with real-world datasets, graph modeling, algorithm comparison, centrality metrics, and unsupervised learning techniques to investigate mobility problems and academic trends.

Skills

- **Languages:** Java, TypeScript, Python, JavaScript, C++.
- **Development:** Angular, Spring Boot, FastAPI, React, Next.js, REST APIs.
- **Data & Infrastructure:** PostgreSQL, MongoDB, Docker, RabbitMQ, Git, GitLab.
- **AI & Data:** RAG, LLMs, embeddings, vector search, Machine Learning, NLP, AI-assisted development.
- **Computer Science Fundamentals:** Data structures, graphs, algorithms, object-oriented programming, digital signal processing.
- **Practices:** Scrum, automated testing, code review, API documentation.
- **Languages:** Portuguese (Native), English (Intermediate), Spanish (Basic).
